

UPDATE THE MAP - There is a **MAP tab** that allows you to enter the latitude and longitude or move the pin placement manually.

- When entering a new listing, you may try to click the **Get Lat/Long from Address** link in the Map tab if the property does not appear to have mapped the coordinates (says **Map Not Found**). This is how the system determines latitude and longitude in order to correctly display listings on a map & include them in map searches.
- If still showing “Map Not Found”, then click on **Set Lat/Long manually** below the map. You will enter the address or address nearby if needed, and then click **Locate** to find the location. When you see the parcel, click on **Place new pin** where it should be placed on the map and then **Done**.
- **GOOGLE STREET VIEW** - Don’t forget to **check/correct the Google Street View** for the property to make sure you can see it clearly (ex the big tree is not blocking the structure). Click on the **Choose Google Street View** link and then after the map popup displays, use the Google Map directional arrows to choose the best view of your listing. Click **OK**.

Latitude Longitude [Update Map](#)
[Get Lat/Long from address](#) [Set Lat/Long manually](#)
[Choose Google Street View](#)

Select Google Street View

Selected Property Location:
 Latitude: 43.201321
 Longitude: -77.798790

[Reset to the default view for the selected location](#)

Selection Tips:
 Use the controls to select the view you want, click the OK button.
